

CLAIMS AFTER PRELIMINARY AMENDMENT OZ 51193

1. A dividing wall column divided in the middle region into a feed section and an offtake section by a dividing wall and having as segments

- a) an upper column region,
- b) an enrichment section of the feed section,
- c) a stripping section of the feed section,
- d) an upper part of the offtake section,
- e) a lower part of the offtake section,
- f) an intermediate region of the feed section,
- g) an intermediate region of the offtake section

and

- h) a lower column region,

where the dividing wall is located vertically between the segments b) and d) and between the segments c) and e) , the segments b) , d) , c) and e) have separation-active internals and the cross-sectional area  $A_b$  of the segment b) ) is at least 10% smaller than the cross-sectional area  $A_d$  of segment d) , and the cross-sectional area  $A_c$  of the segment c) is at least 10% greater than the cross-sectional area  $A_e$  of segment e).

2. A dividing wall column as claimed in claim 1, wherein the cross-sectional area  $A_b$  of the segment b) is at least 40%, preferably at least 60%, smaller than the cross-sectional area  $A_d$  of segment d) .

3. A dividing wall column as claimed in claim 1, wherein the cross-sectional area  $A_c$  of

CLAIMS AFTER PRELIMINARY AMENDMENT OZ 51193

the segment c) is at least 40%, preferably at least 60%, greater than the cross-sectional area of segment e).

4. A dividing wall column as claimed in claim 1, wherein the dividing wall is arranged obliquely between the segments f) and g) and forms an angle of from 25 to 75°, preferably from 55 to 65°, to the horizontal.

5. A dividing wall column as claimed in claim 1, wherein the operating pressure P is in the range from 0.0005 to 10 bar and the calculated ratios of the cross-sectional areas  $A'_b/A'_d$  and  $A'_c/A'_e$  are given by the following relationships

$$\frac{A'_b}{A'_d} = \left( \frac{m_{s,b}}{m_{s,d}} \right) \times \left( \frac{m_{i,b}}{m_{i,d}} \right)^c$$

$$\frac{A'_c}{A'_e} = \left( \frac{m_{s,c}}{m_{s,e}} \right) \times \left( \frac{m_{i,c}}{m_{i,e}} \right)^c$$

where  $A'_b$ ,  $A'_d$ ,  $A'_c$ ,  $A'_e$  are the cross-sectional areas of the segments b,d,c,e provided for the calculation;  $m_{s,b}$ ,  $m_{s,d}$ ,  $m_{s,c}$ ,  $m_{s,e}$  are the volume flows of gas through the segments b,d,c,e, measured in  $m^3/h$ ;  $m_{i,b}$ ,  $m_{i,d}$ ,  $m_{i,c}$ ,  $m_{i,e}$  are the volume flows of liquid through the segments b,d,c,e, measured in  $m^3/h$ , and the exponent C is obtained as operating-pressure-dependent variable from the empirically determined function shown in Fig. 3, and the calculated ratios  $A'_b/A'_d$  and  $A'_c/A'_e$  deviate from the corresponding, actual ratios  $A_b/A_d$  and  $A_c/A_e$  by not more than 30%, preferably not more than 20%.

6. A dividing wall column as claimed in claim 1, wherein the operating pressure is

CLAIMS AFTER PRELIMINARY AMENDMENT OZ 51193

from 0.0005 to 0.02 bar and liquid distributors in which the liquid predistribution occurs by the bank-up principle and the downstream fine liquid distribution occurs by the capillary principle are used.

7. A dividing wall column as claimed in claim 1, wherein ordered packing having a cross-channel structure is used as separation-active internals.

8. A dividing wall column as claimed in claim 1, wherein ordered packing having a cross-channel structure is used as separation-active internals and the uppermost layer of packing below the liquid distributor is aligned so that the individual layers are aligned parallel to the dividing wall.

9. A process for isolating pure ethylhexyl p-methoxy- cinnamate by distillation using a dividing wall column as claimed in any of claims 1 to 8, wherein the feed mixture introduced comprises from 70 to 95%, preferably from 75 to 90%, of ethylhexyl p-methoxycinnamate as intermediate-boiling desired product.
